

## PROJECT INFORMATION SHEET

### SHERMAN PLACE WATERLINE REPLACEMENT – PROJECT W-478

#### **Project Overview:**

- Work includes the installation of over 230 linear feet of 4-inch diameter ductile iron water main.
- Two water service laterals will be replaced.
- The existing water main has been identified as a problem area with numerous patchwork improvements made by Public Works. The existing pressure within the water main is low.

#### **Construction Schedule:**

- Construction work started March 2023 and is anticipated to be completed by the end of June 2023.

#### **Water Use Impacts:**

- Local residents may be asked to cease water usage for brief windows of time during construction for new connections to the existing water main. Contractor is required to place 48-hour door hangars to notify residents of the water shutdown times.

#### **Traffic Impacts:**

- Construction vehicles will impact nearby travel lanes along Nimitz Street and North Vernonia Road.
- Expect equipment and workers in the roadway along Nimitz Street for water connections.
- Minimal impacts to pedestrian traffic.
